Original geometries used in native hydrodynamic calculations

(a) Vessel reconstructed from curved sections

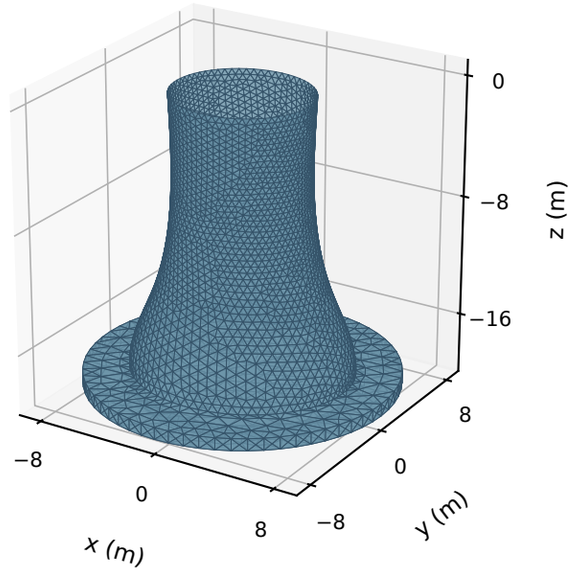

6,120 wetted panels
Wet extents = 120.0 × 22.2 × 8.0 m
Volume = 13,344.017 m³
CAD/mesh volume difference = 0.464%

(b) Polygonal caisson with a through moonpool

860 wetted panels
Wet extents = 70.0 × 40.0 × 10.0 m
Volume = 23,600.000 m³
CAD/mesh volume difference = 0.000%

(c) Curved CAD spar with a finite heave plate

7,793 wetted panels
Wet extents = 19.0 × 19.0 × 20.0 m
Volume = 1,720.427 m³
CAD/mesh volume difference = 0.244%

Mean wetted surfaces. Coordinate units: m. Equal spatial scales within each view.
